PROFESSIONAL SUMMARY

Software Developer with 5+ years of experience designing, developing, integrating, and supporting enterprise applications, e-commerce platforms, APIs, ERP systems, embedded applications, and IoT solutions. Proficient in Java, Spring Boot, Vue.js, MuleSoft, SQL, REST APIs, SAP, Microsoft Dynamics NAV, SANA Commerce, BizTalk, FirstSpirit CMS, and Apache Solr. Experienced in leading system migrations, resolving complex production and integration issues, and collaborating with globally distributed teams across Europe, Asia-Pacific, the Americas, and the Middle East.

CORE COMPETENCIES

Languages: Java, JavaScript, Python, C#, C++, Embedded C, PHP, SQL, PL/SQL
Frameworks & Web: Spring Boot, Spring Framework, Vue.js, Node.js, HTML5, CSS3, Bootstrap, Maven
Integration & APIs: REST APIs, MuleSoft, XML, JSON, Swagger/OpenAPI, BizTalk, SANA Commerce, Spryker
Enterprise Platforms: SAP, SAP KPO, Microsoft Dynamics NAV, FirstSpirit CMS, APACHE SOLR
Data & Infrastructure: Microsoft SQL Server, SQLite, Git, Bitbucket, Jira, Azure, AWS, Tomcat, IIS
Embedded & IoT: Raspberry Pi, Arduino, RFID, MQTT, Node-RED, Raspbian OS
Delivery: Agile, Scrum, production support, incident resolution, testing, deployment, stakeholder management

PROFESSIONAL EXPERIENCE

IT Web Developer & Consultant – Enterprise Applications **Jun 2023 – Present**
ZF Asia Pacific Pte Ltd | Singapore

- Develop and support enterprise e-commerce applications using Vue.js, Java, SQL, SANA Commerce, BizTalk, and integrated ERP platforms.
- Design and maintain interfaces between Microsoft Dynamics NAV, SAP, SAP KPO, BizTalk, and SANA Commerce to ensure reliable data exchange across business systems.
- Lead ERP onboarding and migration activities across 15 regional markets, including configuration, data validation, troubleshooting, testing, and production support.
- Design and enhance the Online Product Catalog platform using Vue.js and Java, with SOLR supporting product search and data retrieval.
- Build and maintain MuleSoft APIs for enterprise integration initiatives, enabling reusable and scalable communication between applications and services.
- Investigate XML workflow failures, integration defects, and production incidents, performing root-cause analysis and implementing corrective actions.
- Manage content deployment through FirstSpirit CMS and coordinate releases with global business and technical stakeholders.
- Collaborate with distributed teams across Europe, Asia-Pacific, the Americas, and the Middle East to deliver enhancements and resolve operational issues.

Software Application Engineer **Feb 2022 – May 2023**
XPAC Technologies Pte Ltd | Singapore

- Led research and development projects as the sole Application Engineer, converting client requirements into functional prototypes and production-ready solutions.
- Designed a Smart-Cart Weighing Scale and RFID-Based Foam Alert System using Arduino, Raspberry Pi, RFID, sensors, and digital logic components.
- Developed IoT application components using C++, C#/.NET, and MQTT to support real-time communication, monitoring, and alerting.
- Collaborated with Nanyang Polytechnic on a multisensory, IoT-enabled parts monitoring and alert system.
- Developed Java Spring Boot REST APIs for a B2B e-commerce platform and supported system integration, testing, debugging, and technical demonstrations.

IT Application Developer **May 2021 – Feb 2022**
Texas Instruments | Baguio, Philippines

- Developed, enhanced, and supported internal manufacturing and business applications, including GForm, Virtual Sorter, eDispo, Product Costing Tool, and Strip Signature Detection.
- Maintained the Java Spring-based GForm application, resolving support tickets, defects, and database issues while delivering feature enhancements.

- Led the Virtual Sorter database migration from DMOS6 to CI, performing validation, testing, and post-migration support to preserve data integrity and business continuity.
- Enhanced eDispo with real-time lot-tracking fields and extended the Product Costing Tool with finance-reporting and configuration features.
- Developed a Python script for Phase 1 SMVS rules and built a Spring Boot web interface and workflow for rule management.
- Worked with manufacturing, finance, and technical stakeholders to gather requirements, test solutions, and support production deployment.

Application Developer Intern **2020**

Texas Instruments | Baguio, Philippines

- Developed embedded software for the TIPI Smart Cabinet project using Embedded C and RFID technology, completing the assigned project ahead of schedule.
- Automated WIPSYS database processes and supported communication between the ERACK equipment server in Dallas and the Barracuda system in Baguio.
- Developed stream-processing functions, improved device reading accuracy, enhanced LED controls, and validated CRC and BCC calculations for reliable data transmission.

EDUCATION

Master of Arts in Business Administration **Expected Completion: May 2027**

Bulacan State University | Philippines

Bachelor of Science in Computer Engineering **Sep 2021**

Mapúa University | Philippines

- First Runner-up, Best Thesis; coursework in Linux administration, embedded systems, software development, databases, and networking.

CERTIFICATIONS

Google IT Automation with Python | Automating Real-World Tasks with Python | C Programming for Embedded Applications | IBM AI Workflow: Machine Learning, Visual Recognition, and Natural Language Processing

PUBLICATION

Raspberry Pi-Based Food Detection for the Visually Impaired Using the YOLO Algorithm

2021 IEEE International Conference on Systems and Information Sciences (ICCIS)

Co-developed a real-time computer-vision solution using Raspberry Pi and the YOLO algorithm to identify food items for visually impaired users.
